

Prandini et al. Supplementary Fig. 3: VE-cadherin tissue distribution in adult mice

Immunolabelling was performed on cryosections as described in Materials and Methods with a polyclonal anti-mouse VE-cadherin (Breier et al. Blood 1996 87:630-42). VE-cadherin was detected in lung alveolae (**A**), spleen vasculature (**B**), in perifollicular vessels (arrow) of the ovary (**C**), in glomerular (arrowhead) and extraglomerular (arrow) vessels of the kidney (**D**), in the endocardium (arrow) and in myocardium vessels (arrowhead) of the heart (**E**), in large (arrow) and sinusoidal (arrowhead) vessels of the liver (**F**), in brain vasculature (**G**) and in vessels of Lewis lung carcinomas (**H**). b, bronchioli; f, follicle; g, glomerulus. Bars = 50 μ m.
