

Table 7: Episodic memory and executive predictors of metamemory function in alcoholic and control groups

Predictors		β coefficient		Group differences between β coefficients
		Controls (N = 28)	Alcoholics (N = 28)	
Episodic memory	Spondee test "spontaneous" condition % "R"	-0.24	0.50**	*
Executive functions	<i>Stroop test Color-Word time</i>	-0.39**	-0.37**	ns
	<i>Verbal fluency</i>	0.01	0.48**	*

ns, not significant

*Significant difference between alcoholic patients and control subjects; $p < 0.05$.

** Significant predictor of metamemory function within the group; $p < 0.05$.
