

Supplementary Figure 1

RVIS scores for genes with recurrent non-synonymous PZMs in probands

(a) Graph showing the $-\log_{10}(\text{P-value})$ calculated from the genes with recurrent non-synonymous PZMs in probands versus RVIS scores of the genes, and (b) genes sorted by increasing order of p-values based on the recurrent non-synonymous PZMs in probands, with the RVIS score for each sorted gene shown on the y-axis.
